

STRIDESM (HMO) MEDICARE ADVANTAGE

Effective Date: January 1, 2017

Subject: Lyme/Tick-Borne Diseases- IV Antibiotic Use

Policy:

Harvard Pilgrim StrideSM (HMO) Medicare Advantage covers intravenous (IV) antibiotics that are medically necessary and clinically indicated for treatment of Lyme and other Tick-Borne Diseases (i.e., Human Granulocytic Anaplasmosis, Babesiosis).

- Covered antibiotics include Ceftriaxone, Cefotaxime, or Penicillin G (as appropriate).
- Use of IV Imipenem-Cilastatin, Ceftazidime, Cefuroxime, Vancomycin, Bicillin, Ampicillin, Azithromycin is not clinically indicated for the treatment of early or late disseminated stages of Lyme disease.

Covered services must be:

- Reasonable and medically necessary based on the member's condition, complexity of requested service(s), and accepted standards of clinical practice;
- An essential part of active treatment of the member's medical condition, and ordered under a plan of care established and reviewed regularly by the attending physician caring for the member; and
- Furnished by provider(s) with appropriate state licensure, and accreditation/certification from an appropriate accrediting organization.¹

Harvard Pilgrim StrideSM (HMO) Medicare Advantage does not cover the use of IV antibiotics for treatment of nonspecific, noninflammatory musculoskeletal complaints/arthralgias or fatigue, or in situations where evidence of Lyme Borrelia infection is based on unvalidated tests. (Such use is not clinically indicated.)

- In addition, Harvard Pilgrim StrideSM (HMO) Medicare Advantage does not cover the extended use of IV antibiotics (i.e., course of treatment that exceeds the timeframes described below) for

¹ Appropriate accrediting organizations include the Joint Commission for the Accreditation of Healthcare Organizations (JCAHO), or another Centers for Medicare and Medicaid Services (CMS) Approved Accrediting Organization.

Medical Review Criteria

Lyme/Tick-Borne Diseases- IV Antibiotic Use

Page 1 of 7

Harvard Pilgrim StrideSM (HMO) policies are based on medical science and relevant information including current Medicare coverage (including National and Local Coverage Determinations), Harvard Pilgrim medical policies, and Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan materials. These policies are intended to provide benefit coverage information and guidelines specific to the Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan. Providers are responsible for reviewing the CMS Medicare Coverage Center guidance; in the event that there is a conflict between this document and the CMS Medicare Coverage Center guidance, the CMS Medicare Coverage Center guidance will control.

treatment of any Tick-Borne Disease as there is insufficient evidence that such use is clinically indicated.

Authorization:

Prior authorization is required for all IV antibiotic treatment of Lyme and Tick-Borne Diseases provided in outpatient, office, or home settings.

- Documentation including history and results of testing from all prior treatment for Tick-Borne Disease(s) must be submitted.

Criteria:

- **Lyme Disease**

Harvard Pilgrim StrideSM (HMO) Medicare Advantage authorizes up to 30 consecutive days of treatment with IV Ceftriaxone, Cefotaxime, or Penicillin G when:

1. Diagnosis is confirmed by positive Lyme-specific IgG Western blot on two tier testing², and clearly documented in the medical record; AND
2. Clinical documentation confirms the member meets the parameters for any of the conditions listed below.

Condition:	Parameters:
Lyme Meningitis	Medical record documentation confirms ALL the following: <ol style="list-style-type: none"> 1. Clinical features of meningitis (e.g., acute headache, photosensitivity, nuchal rigidity, fever); 2. Positive Lyme specific IgM Western blot on two tier testing, with or without IgG positivity³; 3. Other causes of meningitis have been evaluated and determined to be less likely; 4. CSF findings (if appropriate) of elevated protein, lymphocytosis/monocytosis, and normal glucose. <ul style="list-style-type: none"> ▪ Requirement for CSF findings may be waived if spinal tap is refused or contraindicated.
Lyme Cranial Neuritis	Medical record documentation confirms ALL the following:

² IgG is considered positive only when 5/10 of the following kDa bands are seen: 18,23,28,30,39,41,45,58,66,93. IgM is considered positive only when the IgM is performed **within 4 weeks** of illness onset, and when 2/3 of the following kDa bands are seen; 23, 39, 41.

³ For the small proportion of patients who have negative or indeterminate IgM positivity, and suspicion remains high repeat testing 2-4 weeks later should be performed. With high clinical suspicion treatment with IV antibiotics will not be delayed for these results.

Medical Review Criteria

Lyme/Tick-Borne Diseases- IV Antibiotic Use

Harvard Pilgrim StrideSM (HMO) policies are based on medical science and relevant information including current Medicare coverage (including National and Local Coverage Determinations), Harvard Pilgrim medical policies, and Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan materials. These policies are intended to provide benefit coverage information and guidelines specific to the Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan. Providers are responsible for reviewing the CMS Medicare Coverage Center guidance; in the event that there is a conflict between this document and the CMS Medicare Coverage Center guidance, the CMS Medicare Coverage Center guidance will control.

Condition:	Parameters:
	<ol style="list-style-type: none"> 1. Unilateral or bilateral cranial nerve affected (facial palsy is most common); 2. Other causes of cranial nerve palsy have been evaluated and determined to be less likely; 3. CSF findings (if appropriate) of elevated protein, lymphocytosis/monocytosis, normal glucose. <ul style="list-style-type: none"> ▪ Requirement for CSF findings may be waived if spinal tap is refused or contraindicated.)
Lyme Radiculoneuritis or Mononeuritis Multiplex	<p>Medical record documentation confirms ALL the following:</p> <ol style="list-style-type: none"> 1. Clinical exam and/or EMG/NCS documents findings of ANY of the following: <ol style="list-style-type: none"> a. Singular or multiple root involvement with motor, sensory, and reflex changes in a physiologic pattern; b. Axonal changes on EMG/NCS c. Findings of mononeuritis multiplex on EMG/NCS, consistent with clinical history and exam 2. Other causes of radiculoneuritis or mononeuritis multiplex have been evaluated and are less likely; 3. CSF findings (if appropriate) of elevated protein, lymphocytosis/monocytosis, normal glucose. <ul style="list-style-type: none"> ▪ Requirement for CSF findings may be waived if spinal tap is refused or contraindicated.
Lyme Carditis	<p>Medical record documentation confirms ANY of the following:</p> <ul style="list-style-type: none"> • 1st degree AV block with PR interval >0.3 sec; or • 2nd or 3rd degree block (usually managed in a monitored setting).
Lyme Arthritis	<p>Medical record documentation confirms ALL the following:</p> <ol style="list-style-type: none"> 1. Intermittent or persistent arthritis⁴ with effusion of the knee or other large joints, and history of abrupt onset of attacks that required joint aspiration; 2. Joint fluid with inflammatory characteristics (i.e., polymorphonuclear predominance \geq 2K cells); 3. Evidence that, if no neurologic involvement, two 28-day courses of oral antibiotics were used, and response was incomplete.

⁴ Other causes of monoarticular or polyarticular arthritis must have been evaluated and determined to be less likely.

Medical Review Criteria

Lyme/Tick-Borne Diseases- IV Antibiotic Use

Harvard Pilgrim StrideSM (HMO) policies are based on medical science and relevant information including current Medicare coverage (including National and Local Coverage Determinations), Harvard Pilgrim medical policies, and Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan materials. These policies are intended to provide benefit coverage information and guidelines specific to the Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan. Providers are responsible for reviewing the CMS Medicare Coverage Center guidance; in the event that there is a conflict between this document and the CMS Medicare Coverage Center guidance, the CMS Medicare Coverage Center guidance will control.

Condition:	Parameters:
Lyme Encephalopathy	<p>Medical record documentation provides objective evidence of cognitive impairment (documented by a neurologist, and neuropsychiatric testing), and confirms ALL the following:</p> <ol style="list-style-type: none"> 1. Other causes of encephalopathy have been evaluated and determined to be less likely; 2. CSF findings (if appropriate) of intrathecal antibody index positivity and/or elevated protein with or without a CSF pleocytosis. <ul style="list-style-type: none"> ▪ Requirement for CSF findings may be waived if spinal tap is refused or contraindicated.
Lyme Encephalomyelitis <ul style="list-style-type: none"> ▪ European-borrelia strains 	<p>Medical record documentation confirms ALL the following:</p> <ol style="list-style-type: none"> 1. Presence of focal neurologic manifestations and cognitive impairment documented by objective testing and detailed mental status exam; 2. MRI demonstrates focal areas of inflammation with increased T2 and FLAIR signal, or enhancement with gadolinium; 3. Other causes of encephalomyelitis have been evaluated and determined to be less likely; 4. CSF findings (if appropriate) of elevated protein, lymphocytosis/monocytosis, and normal glucose. <ul style="list-style-type: none"> ▪ Requirement for CSF findings may be waived if spinal tap is refused or contraindicated.
Lyme Peripheral Neuropathy	<p>Medical record documentation confirms ALL the following:</p> <ol style="list-style-type: none"> 1. One or more of the following: <ul style="list-style-type: none"> ▪ Symmetric distal paraesthesia (i.e., burning, tingling, numbness), multimodal sensory loss (e.g., pinprick, vibration), and mild or absent weakness/hyporeflexia ▪ EMG/NCS documentation of patchy axonal polyneuropathy or confluent mononeuritis multiplex; 2. Other causes of the peripheral neuropathy have been evaluated and determined to be less likely. <ul style="list-style-type: none"> ▪ Results of Lumbar Puncture may be required (if clinically indicated) to exclude central inflammatory conditions in complex cases. Requirement may be waived if spinal tap is refused or contraindicated.

- **Human Granulocytic Anaplasmosis (HGA)**

Medical Review Criteria

Lyme/Tick-Borne Diseases- IV Antibiotic Use

Harvard Pilgrim StrideSM (HMO) policies are based on medical science and relevant information including current Medicare coverage (including National and Local Coverage Determinations), Harvard Pilgrim medical policies, and Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan materials. These policies are intended to provide benefit coverage information and guidelines specific to the Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan. Providers are responsible for reviewing the CMS Medicare Coverage Center guidance; in the event that there is a conflict between this document and the CMS Medicare Coverage Center guidance, the CMS Medicare Coverage Center guidance will control.

Harvard Pilgrim StrideSM (HMO) Medicare Advantage authorizes up to 10 days of IV doxycycline⁵ when documentation confirms ALL the following:

1. Acute onset of systemic viral-like illness (e.g., fever, myalgia, headache), often in association with thrombocytopenia, leucopenia and /or elevated liver enzymes⁶; and
2. The member cannot tolerate an oral antibiotic.

- **Babesiosis**

Harvard Pilgrim StrideSM (HMO) Medicare Advantage authorizes up to 10 days of IV clindamycin⁷ when documentation confirms acute onset of systemic viral-like illness (e.g., fever, myalgia, headache) and ANY of the following:

1. Acute onset of systemic viral-like illness (e.g. fever, myalgia, headache); or
2. Positive parasitemia on blood smear, or positive PCR amplification of babesial DNA.

Exclusions:

Harvard Pilgrim StrideSM (HMO) Medicare Advantage does not cover IV antibiotics for treatment of Lyme and other Tick-Borne Diseases when criteria above are not met.

In addition, Harvard Pilgrim StrideSM (HMO) Medicare Advantage does not cover:

- IV antibiotics (e.g., Imipenem-Cilastatin, Ceftazidime, Cefuroxime, Vancomycin, Bicillin, Ampicillin, Azithromycin) for the treatment of early or late disseminated stages of Lyme disease as there is no evidence that such use is clinically indicated
- Combination antimicrobial therapy for Lyme disease
- IV antibiotics when evidence of Lyme Borrelia infection is based on unvalidated tests including (but not limited to):
 - Antigen urine assay
 - Culture, immunofluorescence staining, or cell sorting of cell wall-deficient or cystic forms of *B. burgdorferi*
 - IgM or IgG tests without a previous ELISA/EIA/IFA
 - Lymphocyte transformation tests

⁵ For children less than 8 years of age without concomitant Lyme disease, treatment is generally for 7 days, or for 3 days after resolution of fever, whichever is longer.

⁶ Supportive testing would include the characteristic intragranulocytic inclusions on blood smear (wide range of positivity of 20-80%).

⁷ Longer duration of antimicrobial therapy may be necessary in highly and persistently symptomatic members. IV clindamycin should be given together with oral quinine in these members.

Harvard Pilgrim StrideSM (HMO) policies are based on medical science and relevant information including current Medicare coverage (including National and Local Coverage Determinations), Harvard Pilgrim medical policies, and Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan materials. These policies are intended to provide benefit coverage information and guidelines specific to the Harvard Pilgrim StrideSM (HMO) Medicare Advantage Plan. Providers are responsible for reviewing the CMS Medicare Coverage Center guidance; in the event that there is a conflict between this document and the CMS Medicare Coverage Center guidance, the CMS Medicare Coverage Center guidance will control.

- Measurements of antibodies in joint fluid (synovial fluid) Polymerase chain reaction (PCR) testing of either serum or urine
- Positive Western blot in the absence of a positive or equivocal other antibody test (i.e., not using two tier testing)
- Quantitative CD57 lymphocyte assays
- “Reverse Western blots”
- Western blot positivity that does not meet CDC criteria
- Less than daily use of authorized IV antibiotics
- IV antibiotics for nonspecific, noninflammatory musculoskeletal complaints/arthralgias or for fatigue

Codes are listed below for informational purposes only, and do not guarantee member coverage or provider reimbursement. The list may not be all-inclusive. Deleted codes and codes which are not effective at the time the service is rendered may not be eligible.

HCPCS Codes	Description
J0696	Injection, ceftriaxone sodium, per 250 mg
J0698	Injection, cefotaxime sodium, per g
J2510	Injection, penicillin G procaine, aqueous, up to 600,000 units
J2540	Injection, penicillin G potassium, up to 600,000 units
J3490	Drugs unclassified injection

ICD10 Codes	Description
A26.0	Cutaneous erysipeloid
A69.20	Lyme disease, unspecified
B60.0	Babesiosis
B99.9	Unspecified infectious disease
L53.9	Erythematous condition, unspecified

Approved by UMCP: 10/25/17

- Revised: 8/16; 10/17
- Initial Approval: 8/26/15

Date	Revision
10/17	Annual review and reissued
9/28/16	Delete HCPCS code (S0077)- not billable to Medicare. Add HCPCS code (J3490), and update ICD10 Code list to include Babesiosis.
8/10/16	Annual review. No substantive changes.
